

Blockchain Multiplayer Fair Game

| bclounge.io

Mission

BClounge.io is a decentralized project based on the TRON blockchain network, which implements interactive multiplayer mechanics in gambling.

Advantages of using the blockchain.

The project team BClounge.io sees the solution to the main problems of online gambling in using of blockchain technologies. The biggest drawback of standard online casinos is centralization. Owner of the game resource or Software developer fully controls your chances to win or lose the game. Users directly fall into a losing position.

Games based on blockchain technologies are inherently decentralised. The code is based on the public blockchain platform. It gives full transparency, each operation can be viewed: all generated results and algorithms by which they are obtained are in the public domain. They can always be compared with your personal observations. This eliminates the possibility to change or fake the result of the draw.

At the same time, decentralization protects users' personal data. To make a bet you don't need to pass any registration and leave your card details. While some of the usual casinos even practice authorization through scans of personal documents. In addition, the winnings are automatically accrued by the smart contract to your wallet. Blockchain guarantees that if a contract stipulates the accrual of winnings, it will happen. "Problems with banks in different countries" are excluded, or even the lack of the required amount in the casino account.

Fair draw BClounge

In traditional online casinos, most of the in-game information is hidden from the user. Therefore, the results are not insured from manipulations. We use blockchain to guarantee a fair play, and offer clear ways to ensure transparency:

- Smart contract is in the blockchain network, and no one can influence the result during the drawings
- Smart contract is published in the public domain. Anyone can use the function to determine the winner, and check the result of the draw
- The history of the draws is also publicly available. Using an open algorithm and history, you can easily check the results of the draw

Our service gives you the opportunity to play with live players, to experience real excitement not only from winnings, but also from the fact that equal live players are defeated. Each round players interact with each other, not with the machine. All winnings are received by the participant of the round, while similar applications give the opportunity to lose or win against the mathematical expectation (smart contract).

At the stage of testing our mechanics, we collected a lot of positive feedback from gambling fans. Our main idea is to bring to the market a new system of games where participants play against equal players, and honesty and transparency of the draw is protected by the blockchain technology.

Mission

TRON

To implement our ideas, we used the TRON blockchain network. TRON already has a huge number of active users. This network has a number of advantages that allow you to create large-scale multiplayer entertainment and gaming applications:

- High transaction speed. TRON allows more than 2000 transactions per second. In the future, this figure will grow.
- Low transaction cost. The transaction cost for the user is 0.00001 TRX.

In addition, TRX (a cryptocurrency based on the TRON network) maintains a stable market value. Capitalization is more than \$ 2 billion. There is no doubt about TRON's liquidity and stability.

How we can contribute to the development of the TRON ecosystem

Our main idea is to transform the market of ordinary online casinos. TRON, thanks to its technical capabilities, creates excellent conditions for creating entertainment and gaming applications. Now the main players in the market are the so-called Dice games, which show the transactional capabilities of the network, but are visually boring, and do not give users any interaction with other players. Despite such uniformity, TRON actively supports the platform developers DAPP, providing them full information and technical infrastructure.

The goal of the BCLounge project first of all is to create a new interactive and exciting game concept. The practice of developing video games shows that the greatest commercial success is shown by multi-user online projects. This can be seen on the example of popular games, CS: GO, DOTA, BattleField, Destiny, which due to the multiplayer modes, significantly outperformed their competitors.

The basis of any gambling is an interaction with a live opponent. Simple basic gambling is just the first step for us as for developers. We have already implemented the simplest PvP mode using the TRON. The most popular card games are next: poker and blackjack. Blockchain will allow you to be sure that the cards are dealt in a random order and their places in the deck do not change. So it will be interesting to play not only with live opponents. Thus, we will be able to attract millions of gambling fans to the blockchain!

Blockchain technologies have huge prospects in all games using drop / loot mechanics, and this is only at first glance. The BCLounge team believes that the integration of TRON into the gambling industry will allow millions of players to play and win honestly.

Dividend model

Playing on the BClounge, you get profit.

Making bets on our project, you get special tokens. Thus, players make their investments in the development of our gaming platform. Each player becomes a co-owner of the platform and will get benefit from the growth and development of the BClounge. Our investors are players and their interest in the game will be an incentive for the development and reward to the developers of the site.

For realization of payment the dividends we issued token "BCL". Project tokens are standard TRC-20 format tokens, and have a registered designation – "BCL". The total output of "BCL" is limited and does not exceed - 100 000 000.

The withdrawal of the token to the exchange is planned after at least 25% of tokens is mined. Additional consultations on this matter will be held with the community of token holders.

Token mining

The "BCL" token can only be obtained by placing bets during games on our website. The process of mining tokens "BCL" is divided into levels. At each level, the token fund will be 3 250 000 for players. Dividends are paid every 24 hours. In the section "Dividends" on the website bclounge.io will run a countdown timer showing the exact time remaining until the next dividend payment. And a progress bar that will show the current mining level, difficulty, and number of issued \remaining tokens.

The minimum sum rate for mining of a single token "BCL" is equal to 700 TRX on the first level of tokens mining. It doesn't matter if your bets win or lose.

As each mining level is completed, the difficulty of mining the "BCL" token will increase.

Dividend model

Below is the chart of token mining levels:

Level №	Number of TRX	Number of tokens issued	Player	Team	Referral system	Energy bank	Total
1	700	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
2	800	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
3	900	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
4	1000	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
5	1100	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
6	1200	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
7	1300	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
8	1400	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
9	1500	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
10	1600	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
11	1800	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
12	2000	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
13	2200	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
14	2400	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
15	2600	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
16	2800	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
17	3000	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
18	3500	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
19	4000	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
20	5000	1	3 250 000,00	1 000 000,00	500 000,00	250 000,00	5 000 000,00
			65 000 000,00	20 000 000,00	10 000 000,00	5 000 000,00	100 000 000,00

Dividend distribution

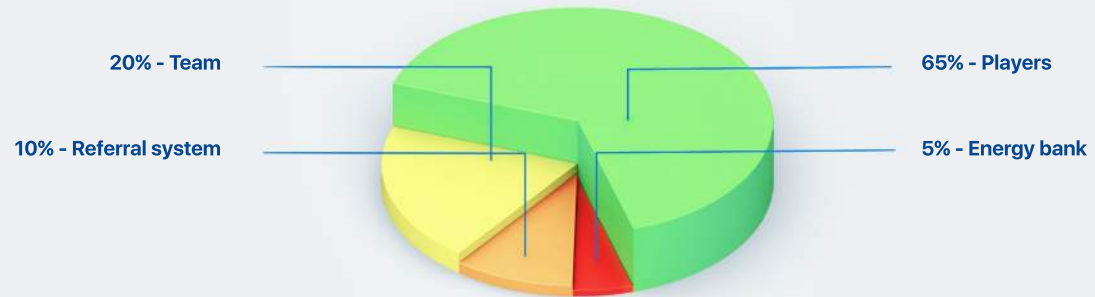

Dividend distribution

The distribution of dividends of the platform is in the cryptocurrency TRON (TRX) among all holders of the token automatically, using a smart contract. Payment of dividends is carried out only on tokens that have been frozen on the smart contract of the service until the end of the current reporting period for payment of dividends, in proportion to the available number of BCL tokens of the holder.

Big advantage of BCL token is freedom in moving of your tokens. You don't need to wait when you decide to unfreeze tokens. BCL will be locked on short period of accrual of dividends. Mining of new tokens fully independent from dividends processing and you will get new tokens at once after you mine it.

For example, you have 5% of BCL tokens. The platform's revenue for the reporting period amounted to 10.000.000 TRX. You will receive an income of $10.000.000 \text{ TRX} * 0.05 = 500.000 \text{ TRX}$.

When launching tokens, there are 0 BCL tokens in circulation.

Players- 65% of tokens will be distributed to players during the mining process.

Energy Bank- 10% will be frozen on a special wallet. The dividends received in the description will be frozen to generate energy for the service transactions of the site in the TRON network. These TRX will always be available for verification, each user will be able to check his availability on the wallet.

Referral system- dividends received by this fund will be used for bonuses in the referral program.

Team- 20% of tokens will be at the disposal of the development team. Dividends from these tokens will be used to maintain the operation of the site, as well as to develop new game mechanics.

For the equitable distribution of income, in the process of tokens mining, every 1 mined by players token brings to the funds Team, Reserve and Referral:

- 0,307692307692000000 BCL- Team
- 0,153846153846000000 BCL - Energy Bank
- 0.076923076923000000 BCL - Referral system

Referral system

Your opportunity to earn TRX attracting your friends

As we said above, BCLounge is based on the idea of multiplayer, a game based on blockchain technology. Therefore, by attracting your friends to our site, you not only make the game more interesting for the whole community, but get a nice bonus.

We offer a referral program where rewards will be paid from the referral fund. Referral fund will be replenished every 24 hours, during the payment of dividends. After replenishment the referral fund, every 24 hours all the TRX funds will be distributed among the owners of "active referrals" (active referral player who came to your referral link and made at least one bet during the reporting period).

For example, in the referral fund is 100.000 TRX, and the distribution involves 2 users with active referrals.

The 1st user has 7 active referrals, the second 3 active referrals. Referral Fund will be distributed proportionally to the number of active referrals. And for the first user it will be 70,000 TRX, and for the second 30,000 TRX.

Such scheme of the referral program guarantees a reward. On other projects, your referrals may not win anything, and therefore you will not get anything.

Roadmap

2019-2020
